**CJSC “Agency of Industrial Information ”ApelSintez”
CEO Alexandr Petrov**

Dear Alexandr!

OJSC “KZCK-Silicon” is implementing the project of building a plant producing organosilicon monomers, based on the principles of governmental and private partnership. The new enterprise will become the first manufacturer of methylchlorosilane in CIS and Eastern Europe.

The project is being supported by government of Tatarstan republic and personally by Rustam N. Minnikhanov. The project is included into development program of oil and gas complex in Tatarstan for 2010-2014, confirmed by Tatarstan ministry cabinet resolution #275 from April, 19, 2010. The project is also included into Tatarstan investment memorandum for 2014.

The foundation stone was officially laid down on June, 18, 2014 in the presence of Industry and trade minister of Russia Denis Manturov, president of Tatarstan Rustam Minnikhanov and chairman of Vneshekonombank Vladimir Dmitriev. Project is being implemented with the support of Vneshekonombank in the framework of federal special-purpose program.

Compulsory condition of opening a credit line by Vneshekonombank was making an independent pre-investment research of organosilicon materials market.

Taking into account careful approach of Vneshekonombank to evaluation of provided materials our company faced the necessity to attract competent specialists in market research.

Effective cooperation with Agency of Industrial Information let us provide all the needed market information to the bank, successfully defend the project and obtain budgeting to build the plant.

**With regards,
CEO**

V. Klienkov
